

Security and Compliance Workshop

Data is at the heart of digital businesses, so information assets must be protected to the highest standards as they expand their presence in the Cloud.

In our Security and Compliance workshops we:

- use interactive techniques to involve participants fully in the process.
- are results-oriented, so you can be confident you will have produced tangible outcomes by the end of the workshop.
- provide Cloud knowledge and inspire participants, sharing our expertise and experience to ensure your strategy is robust.

Who is this workshop designed for?

- Security/compliance/Governance leaders (CISO, CTO, CIO)
- VP of Products
- VP of Security
- Network Engineering Architects
- Business and Enterprise Architects
- Head of DevOps

What is the purpose of the workshop?

To understand cloud security and compliance concepts. To identify relevant cloud reference architectures. To extend existing control objectives into the cloud, and identify controls in hybrid or cloud-only environments.

What are the expected outcomes of the workshop?

This is a very in-depth workshop, resulting in documentation for:

- Cloud security strategy
- Updated security policy

Where will the workshop take place?

We recommend that this is off-site, either at the HeleCloud™ premises or in an alternative location, to avoid the daily distractions of your business. However, if you need to remain on-site, we can make recommendations regarding ways to reduce interruptions.

How long will the workshop take?

Five working days.
